OFFICE OF ACADEMIC GOVERNANCE & INTEGRITY

Policy on Use of Generative Artificial Intelligence (GenAI)

1. Purpose and Scope

This policy outlines mandatory guidelines regarding the ethical utilization of Large Language Models (LLMs), code synthesis tools, and generative vision models across all undergraduate and postgraduate coursework.

2. Categorization of AI Assistance Levels

Every assessment item assigned by the University is classified under one of three strict levels of permitted AI interaction:

Category A: Fully Prohibited (No AI Allowed)
Assessments designed to test foundational knowledge (e.g., closed-book exams, live practical coding tests). Zero AI tool usage is allowed. Detection triggers immediate academic dishonesty procedures.

Category B: AI as an Auxiliary Assistant (Acknowledged Use)
Students may use GenAI tools (e.g., ChatGPT, Claude, Copilot) for proofreading, grammar corrections, ideation, or explaining complex concepts. All prompts and outputs must be logged in an appendix.

Category C: AI-Integrated Assignment (Core Requirement)
Assignments specifically evaluating prompt engineering, RAG pipelines, fine-tuning, or critical evaluation of AI responses. Synthesis and critique are required components.

3. Mandatory Citation Format for Generative Output

When citing generative AI assistance in reports, students must provide explicit citations formatted as follows:

- **In-text declaration:** "The Python data processing script was refined using OpenAI GPT-4o (Model version: 2026-05) to optimize runtime complexity."
- **Declaration Statement:** A mandatory signed statement must be attached to every submission stating: *"I hereby declare that all un-cited text, logic, and solutions in this document represent my original intellectual work."*

4. Penalties for Non-Compliance

Failure to declare GenAI usage constitutes Academic Misconduct under Regulation 14. Penalties range from zero marks for the submission to permanent expulsion from the degree programme.
